

**Comments by the students immediately after the 3D projection system was used in Bio 1810, Macromolecular Structure and Function, Fall 2004.**

Very helpful and useful, excellent tool, better understanding of molecules, see structures better than 2D, makes complicated structures easier to visualize, made concepts clearer, a good supplement to course material, great way to illustrate structures, should be used more often, should be made available for students use

**In summary**, 22 students responded – 18 thought it was all around helpful and neat, 2 no responses, 1 didn't think it helped anymore than 2D, 1 thought it was just ok for simple structures.
