### **Instructions to install DepthCharge plugin.**

In order to demonstrate the 3d effect with “glasses”, you will need to install depthcharge.

#### **To install depthcharge:**

- 1) go to <http://vrex.com/>
- 2) click on download on the top menu bar
- 3) click on the get depth box
- 4) from here just pick which browser you want to install it on, and it will.

Now you can view any depthcharge enabled site with the glasses. In order to get it to display in the proper format for your glasses, click on the symbol in the lower left hand corner of the depthcharge image (you might have to pause the mouse over the image to get this to come up) It will bring up a menu, select in browser view, and try the view options that say red/blue or blue/red till you get one that works (depending on the glasses that you have). You'll need to set the full screen option to the same setting. Now you are ready to look at stills and movies in 3D. Try some of these links: (this first site is particularly good, there are chemistry images here as well as a couple of movies)
